| | | Vegetation corridors are present within 500m of the patch. Extensive vegetation corridors including exotic forest, vegetated waterways | | | | | | | | | |
| | | etation corridors includin o boundary of the forest : | | | | | | | | | |
| | forest over 10ha | aroas or native | | | | | | | | | |

| 3) On the Fo | orest Edge See FORMAK Visual Guide | | | |
|----------------------------|---|------------------------|--|--|
| | Estimate (Circle appropriate level) | Notes Species etc | | |
| Forest edge canopy | 1) Major dieback in canopy, dead standing trees. 2) Areas of significant dieback, but all trees live. 3) Small areas of localised dieback. 4) Canopy without dieback. | | | |
| Forest edge understorey | Understorey completely absent. Some understorey present and occasional seedlings / saplings present close to the edge of the canopy. Considerable understorey and many seedlings / saplings around the edge of the canopy. Vigorous, abundant understorey with a range of seedlings / saplings spreading well beyond the current extent of the canopy. | | | |
| Forest edge - weeds | Many weeds present along edge – weeds dominate understorey. Weeds common as scattered patches and individuals along the boundary. Few weeds forming isolated patches or individuals on edge. Local native vegetation dominates understorey. No weeds present. | some gorse on boundary | | |
| Fencing | No fencing Some fencing, e.g. one side, or fence poorly maintained with large breaks Most of boundary fenced, includes all areas where stock access likely. Some small recent breaks. Secure, intact fencing around whole area, or area where no possibility of stock entry (e.g. urban). | - | | |
| Adjacent land use | Livestock farming (note type) Exotic Forest Residential / urban Reserve (public or private reserve land) | | | |

4) Moving Through the Forest See FORMAK Visual Guide

Doing Simple Counts (see end of this form)

| State | Estimate (Circle appropriate level) | Notes Species etc |
|-------------------------------|---|----------------------|
| Canopy Condition | Very sparse foliage, many large holes, dieback covers more than 25% of tree crowns. Foliage sparse in some areas, canopy holes common. Some dieback. Foliage mostly dense, only occasional sparse areas, Canopy holes rare, very occasional dieback. Abundant dense foliage over whole canopy, no canopy holes or dieback. | |
| Canopy Browsing | Severe canopy browse: 75-100% of leaves browsed on possum preferred species. Moderate: heavy canopy browse - 25-75% of leaves browsed on possum preferred species Light canopy browse: 1-25% of leaves browsed on possum preferred species. No canopy browse. | |
| Understorey / Regeneration | 1) Understorey completely bare of all species. 2) Very few plants preferred by deer / goats / stock are present in the knee to shoulder height range. Scattered seedlings of other species. 3) Moderate numbers of plants preferred by deer / goats / stock are present in the knee to shoulder height range. Other species relatively abundant. 4) Abundant plants preferred by deer / goats / stock and other species may also occur. | |
| Understorey Browsing | 1) Severe understorey browse. 75-100% of stems of deer/goat/stock preferred species are browsed. Understorey may be completely bare. 2) Moderate – heavy understorey browse. 25-75% of stems of deer/goat/stock preferred species are browsed. 3) Light understorey browse. 1-25% of stems of deer/goat/stock preferred species are browsed. 4) No understorey browse. | |

| State | Estimate (Circle appropriate level) | Notes Species etc |
|--------------|--|----------------------|
| Ground Cover | Bare soil, rock / gravel covers more than 20% of ground. Eroding soil common. Ground vegetation (ferns, moss, seedlings etc less than 50cm tall) absent or very uncommon. Scattered bare soil and rock. Eroding soil uncommon. Ground veg (see definition in (1)) covers less than 20% Bare soil, rock absent or very uncommon. No eroding soil. Ground veg (see definition in (1)) covers 20 – 50% of ground. No bare soil, rock, or eroding soil. Ground veg (see definition in (1)), abundant, covering 50-100% of the ground. | |
| Bird Song | Bird song almost entirely absent. Only occasional calls heard. Bird song present some of the time, but with extended breaks. Ongoing bird song but with occasional breaks. Continuous bird song with no breaks. | |

5) Canopy Gaps See FORMAK Visual Guide
(Find gaps in the canopy, over 3m in diameter, and examine the understorey vegetation)

| Canopy Gap | Estimate (Circle appropriate level) | Notes Species etc |
|---------------|---|----------------------|
| Regeneration | No seedlings – area completely open. Occasional seedlings – scattered individuals Seedlings common – brush against you as you walk across area Abundant, dense cover of seedlings and undergrowth – you have to continually push your way through. | - |
| Species | No plants preferred by deer / goats / stock – dominated by tree ferns, pepperwood or other unpalatable species. Occasional plants preferred by deer / goats / stock amongst dominant tree ferns, pepperwood or other unpalatable species. Common plants preferred by deer / goats / stock. Unpalatable species such as tree ferns, pepperwood etc also common. Abundant plants preferred by deer / goats / stock dominate. | |

6) Threats ? See FORMAK Visual Guide

| Threat | Estimate | Notes |
|-------------|---|---|
| | (Circle appropriate level) | Species etc |
| Vine Weeds | Very common, cover more than 50% canopy. | |
| | 2) Common, 10 – 50% canopy. | |
| | 3) Occasional, up to 10% canopy. | |
| | (4) None present. | |
| Shrub Weeds | 1) Very common, more than 50% understorey or canopy. | small amount of Gorse in open areas |
| | 2) Common, 10 – 50% understorey or canopy. | Small dividores |
| (| (3) Occasional, up to 10% understorey or canopy. | Gorse in open |
| | 4) None present. | areas |
| Ground | 1) Very common, cover > 50% ground area. | |
| cover weeds | 2) Common, 10 – 50% ground area. | |
| | 3) Occasional, up to 10% ground area. | |
| | (4) None present. | |
| Possums | 1) Abundant fresh sign (droppings, pad runs, bark scratching / biting). | |
| | (2) Common fresh sign but sometimes scattered. | |
| S | 3) Sign uncommon, often quite old. | |
| | 4) Sign very rare or non existent. | |
| Deer | Abundant fresh sign (droppings, major tracks & hoof prints). | |
| | Occasional deer may be disturbed | |
| (| (2) Common fresh sign but sometimes scattered. Sightings of deer | |
| | uncommon. | |
| | 3) Sign uncommon. Sign is often old | |
| | 4) No sign | |
| Goats | 1) Abundant fresh sign (droppings, major tracks & hoof prints). Goats | |
| | commonly heard or seen. | |
| 1 | 2) Common fresh sign but sometimes scattered. Occasional goats | |
| | heard or seen. | |
| | (3) Sign uncommon. Sign is often old | |
| i - | (4) No sign | į |

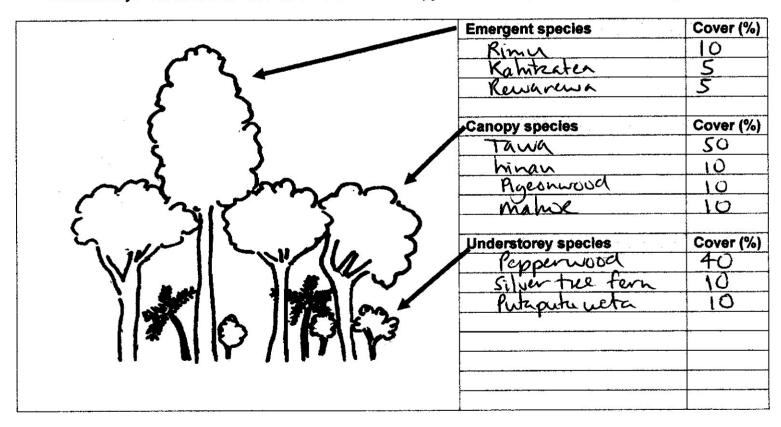

| Threat | Estimate (Circle appropriate level) | Notes Species etc |
|------------------|--|----------------------|
| Stock | 1) Abundant fresh sign (droppings, major tracks & hoof prints). Stock heard or seen throughout area. 2) Common fresh sign but sometimes scattered. Occasional stock heard or seen, generally confined to scattered areas on edge. 3) Sign uncommon. Sign is often old. Only near edges. 4) No sign | |
| Human Impacts | Widespread trampling, and other damage throughout area. Common trampling and damage but limited to certain areas Occasional localised minor damage No damage | |

Vegetation

Identify the main species and the approximate percentage of the site they cover. This includes both **native and exotic** (introduced) species. Don't try to record all species, just the more common ones.

Estimate this percentage cover in each of the three broad height tiers:

- Emergent species: Larger trees sticking out above the main canopy these may be species like rimu or kahikatea.
- Canopy species: The trees making up the main canopy of the forest.
- Understorey: Trees and shrubs below the main canopy of the forest, but above knee height.

Note: Percentage cover in each tier must total to less than 100%.
